Abstract (en)

[origin: WO2008040677A1] The invention relates to a method for managing communication channels for the transmission of multimedia content from at least one server (35) to at least a radio-communication terminal (36). According to the invention, the method comprises the following steps: transmitting a first content (37) through a first channel; progressively restoring said first content (37) in a terminal; transmitting from said terminal a request (38) for a second content (39), the request (38) including a control information indicating whether said second content (39) should be transmitted through the first channel or through a second channel; progressively restoring said second content (39).
