Abstract (en)

[origin: EP2077233A1] A method and arrangement for leading the wrapping material of rolls of wrapping material in a packing machine from a roll of wrapping material to a roll being packed in the wrapper of paper, board and other fibrous materials comprises at least a wrapping station (2) and at least one place (4) for the roll of wrapping material. For handling the wrapper the arrangement includes elements (9) for leading a packing wrapper (21) from a roll of wrapping material (4,5-8) to a roll being packed at the wrapping station (2). Furthermore in the arrangement, there is at least one place (5-8) for the roll of wrapping material which is located so that the longitudinal axis of the roll of wrapping material (5-8) placed in it forms an angle with the longitudinal axis of the roll being packed when unwrapping the wrapper (21). For leading the wrapper (21) to the roll being packed, there is arranged at least one creasing element (9).
