Abstract (en)
[origin: EP2369102A1] The device (10) has an electrical switching unit (11) i.e. button unit, for controlling an electromechanical lock (30), and a cylinder lock (12) for locking and unlocking the electromechanical lock. An emergency opening unit (14) enables the electromechanical lock to be mechanically opened during a power failure and is integrated in the cylinder lock. The cylinder lock has a closing position, an operating position and an additional position i.e. open position, in which the cylinder lock mechanically acts on the electromechanical lock by a connecting unit. Independent claims are also included for the following: (1) a drive device for a movable part (2) a box, in particular glove compartment box.
