Abstract (en)
[origin: DE102006046399A1] The method involves displaying a error conditions of the components by status value. A status value (115) is determined dependent on an error condition of a component (110) and another status value (125) dependent on an error condition of another component (120) and its dependent on the former status value. The status value has a value, which indicates that a component is valid or invalid. Independent claims are also included for the following: (1) a device for the execution of the method (2) a computer program with program code medium for the execution of method.
