Abstract (en)

[origin: EP2078467A1] The system has a steel spring, and a stabilizing element (3) including a lug that acts as a heel supporting part. The element has a stable or elastic plastic part. A heel (2) has a negative recess corresponding to the shape of the lug. The heel is fixed to the lug by a lockable fastening unit in the form of a plug and socket device and/or a snap-in locking device. The lug and the recess are dimensioned and formed together in a form-fit or force-fit manner, so that the heel is fixedly connected with the lug in cooperation with the fastening unit.
