Abstract (en)

[origin: EP2078485A2] The cleaner (100) has a housing comprising two housing parts that enclose a chamber for retaining an engine blower after assembling. The engine blower comprises a wall area extending in a joining direction. The wall area comprises two wall sections with circularly closed contour, where one of the wall sections is formed like a truncated cone. The wall sections overlap at edge areas of the housing parts, by tight fit without a seal. Each of the wall sections is arranged at one of the housing parts. The wall sections possess a circular or oval cross section.
