Abstract (en)

[origin: EP2078683A1] A package having a dual seal designed to permit venting of the package during microwave heating or cooking while minimizing the possibility for a messy and inadvertent escape of product onto, for example, the floor and walls of the microwave. The seal system (18,20) sets up a tortuous path for vapors and any splatter from food products, particularly liquid food products, to travel during venting.
