Abstract (en)

[origin: EP2078806A1] The lock (10) has a rotating driver (18) mounted remote from an axial hole (34) and a radial recess (37) in an extension of a cylindrical assembly (22). The driver actuates a locking mechanism. A coupling disk (50) is mounted in axial translation between the driver and the cylindrical assembly. The disk is coupled in rotation with a key (14). The translation of the key through the hole and recess provokes translation of the disk and engages the disk with the driver for rotatably driving the driver, when the key is driven in rotation.
