Abstract (en)  
[origin: WO2008043868A1] The invention relates to a reversible, multi-purpose modular panic closure device including a main lock (1) in which a compact modular kinematic chain is installed, which, taking the operative configuration of the main lock (1) in the door (4) as the positional reference, consists of an upper bell-crank lever (2), a lower bell-crank lever (3), a first disc (5), a rotary shaft (6) and vertical, sliding upper (7) and lower (8) plates, said upper (2) and lower (3) bell-crank levers being disposed in a vertical plane transverse to the door (4) with the interior or concave angle facing the door (4) and the elbow thereof being hinged at symmetric points in relation to the rotary shaft (6).
