Abstract (en)

The case has a bottom part (22) and a lid forming a cavity. The cavity has a box (58) including an activation orifice arranged at level of a side wall of the bottom part permitting to place an electromagnetic actuator. The box is adapted to house, in a sealed manner with respect to the cavity, the electromagnetic actuator in a rest position at inside of the case and in an active position, in which the actuator protrudes out from the case by the activation orifice and a recess of the lid. Independent claims are also included for the following: (1) an electronic module comprising an actuator associated with a connector passing through a passage of the box (2) a triggering device comprising an electronic module with a case integrated to a case of a transformation block (3) a method for assembling a triggering device.

Abstract (fr)

Un module électronique pour un déclencheur (200) a été optimisé de façon à intégrer les fonctionnalités connues, notamment les paramétrages de seuil, mesures du courant, prises de tension (36, 78), affichage et communication (72). Dans le module électronique est en outre présent un actionneur électromagnétique (54) de façon à optimiser la coupure du disjoncteur associé (3). Les contraintes d'encombrement inhérentes à la localisation du déclencheur (200) dans les appareillages existants (1) ont été respectées.
