Abstract (en)

[origin: WO2008056050A1] The invention relates to a method for defining a common repository for a video game system. The system comprises at least two remote controlled vehicles (1), i.e. a first vehicle and a second vehicle each comprising a video sensor (19) and a reference member (69) with recognisable areas (71). The method comprises the following steps: positioning the first vehicle relative to the reference member (69) so that the recognisable areas (71) are located within the visual field of the first vehicle video sensor (19); processing the image provided by the video sensor (19) of the first positioned vehicle for registering the recognisable areas (71) in the image; deriving the position of the first vehicle relative to the reference member (69) using the registration of the recognisable areas (71); and transmitting the position of the first vehicle to the second vehicle.
