Abstract (en)

[origin: WO2008040645A1] A method for determining a target state in a system having a plurality of components, wherein system states of different priorities can be selected in the system as a function of the availability of the components, comprises a step of detecting (102) whether a system state of the highest priority can be selected, a step of determining (104) the system state of the highest priority as the target state if the system state of the highest priority can be selected, and a step of detecting (112, whether a system state of the next highest priority can be selected if the system state of the highest priority cannot be selected, and of determining (114) the system state of the next highest priority as the target state if this state can be selected.
