Abstract (en)

[origin: FR2907545A1] The device (4) has an electronic module and an annular fixation part (7) fixed on upper edge of a reading frame (3) of a liquid meter (1) e.g. water meter. An engagement part has two arms arranged facing each other and overlaps each other. The arms are connected together by a cam (15), where the cam is movable in rotation with respect to the former arm. The rotation leads to a longitudinal displacement of the latter arm with respect to the former arm for adjusting length of the engagement part.
