Abstract (en)

[origin: EP1916574A1] The hand i.e. hour hand (35) has a base (36) driven by an hour wheel (33) of a clock movement for being rotated along a rotation axis. The base is extended by a stem (40) cooperating with graduations of a timepiece. The stem defines a bearing for rollers (46, 70), equipped with radial or conical teeth (48, 77), with respect to another rotation axis perpendicular to the former axis. The rollers are driven in rotation with respect to the bearing along the latter axis by driving mobiles (50, 78) of the clock movement. An independent claim is also included for a clock movement comprising a driving mobile.
