Abstract (en)  
[origin: WO2008043921A2] The present invention relates to a method and a system for tracking medical products in which the product (11, 12) and/or the conditioning (16) thereof is marked with a first reference (18) stored in a first file (20), and the conditioned product is delivered (7) to the client and stored for further use by a patient registered in a second file (31). The method further comprises automatically and remotely detecting (27) the product references upon delivery and storing them in a third file (28) for the management of the client's stock upon an operation. The method further involves automatically detecting (30) the removal of the product from the stock, inserting the product references into the second file (31) corresponding to the client's patient for whom it is used or will be used, creating a fourth file (36) containing partial references from the patient's file and the determined references of the product for tracking, and automatically or semi-automatically transmitting (5) said fourth file to the product provider (4).
