Abstract (en)
[origin: EP2080537A1] The damper has housing for a shut-off valve (3), which is rotatably supported on a rotational axis. The shut-off valve includes an area (9), which projects into a gap (7), and radially extends over a circumference laterally within an area of the rotational axis, in such a manner that the movement gap between the shut-off valve and a material is clearly small than in other areas, within the area of the rotational axis.
