Abstract (en)

[origin: EP2080541A1] The device has a support piece (8) including two rows of vertical lateral teeth (11a, 11b) cooperated with corresponding lateral teeth (13a, 13b) of a movable lock (12) that is mounted on a skier shoe fixation base, where support piece serves as a gliding slide. The teeth (11a, 11b) are longitudinally offset relative to one another such that a hollow profile zone is opposite to each projecting tooth of the row of teeth (11a), and a projecting zone is opposite to each hollow profile of the row of teeth (11a).
