Abstract (en)

[origin: EP2080563A2] The roller (10) has a cylindrical base body (11) formed as a hollow body, and respective flange elements (14, 15) are attached to the base body on front sides (12, 13) lying opposite to each other. The flange elements lie opposite to each other, stay in connection with each other by a connection element (17), and are connected with the base body by bonding. The flange elements are deformed against each other as the connection element by a tensioning rod (18) that is completely arranged in a hollow space (16) formed by the flange elements and base body.
