Abstract (en)
[origin: EP2080592A1] The ring (1) has two arms (3, 4) hinged to a support (2), and die stocks (40-42) provided on the support and on the arms. One of the die stocks is pivotably supported, and each die stock has a U-shaped cross-section by a part of length of the die stocks. The arms are spring-loaded in a direction of a pressing position, and the support is provided at ends of the ring with respective slots. Projections (13, 14) of the arms are engaged in the slots, and the die stocks are supported on an interior side (72) of the support before a pressing process.
