Abstract (en)

[origin: EP2080600A1] The module (12) has a lower platen (28) movable by a drive relative to a frame-fixed upper platen (26) for the execution of a punching stroke (H) for punching a printing substrate that is passed between the platens, so that the lower platen is engageable to the upper platen. The printing substrate is processable by a punching tool. A printing substrate transport device (16) guides the printing substrate and is mounted on the lower platen in a fixed manner. The printing substrate transport device is provided as an indentation group that exhibits a driven indentation roller. An independent claim is also included for a flatbed punch for processing a printing substrate.
