Abstract (en)
[origin: EP2080841A2] The element (1) has a thrust plate (3) penetrating an insulating body (2) and running perpendicular to a longitudinal extension, where the length of the thrust plate is same as the width of the insulating body. One of U-shaped handles (6) made of reinforcing steel is attached to both vertical faces (7) of the thrust plate, where the vertical faces run in a plane stretched by the thrust plate. Upper and lower side pieces (60, 61) of the handles run away protruding from the thrust plate. A connecting piece (62) between the side pieces of the handles runs straight.
