Abstract (en)

[origin: EP2080852A1] The lining has linkages (3) flexibly connected with each other, and two mounting plates (1) flexibly connected with each other by bolts (2) and rotatable against each other. One of the plates is connected with an access way flap by the bolts, and the other plate is connected with the lining. An auxiliary axle bearing (11) is arranged in the plates, where an auxiliary rotating axis (12) of the bearing runs parallel to the bolts. A stop surface (31) is formed at each of the linkages, where the stop surface rests on a counter stop surface of the plates with a maximum opening angle of the flap.
