Abstract (en)  
[origin: EP2080857A2] The arrangement has a rotatable body (10) changeable in its position during influence of accelerating force in case of accident. The rotatable body is arranged in a suspension (11), such that the rotatable body is rotatable from a rest position into two degree of freedom of rotation. The rotatable body is coupled with a pivot, such that rotation of the rotatable body actuates the pivot from the rest position over a preset locking angle, and actuation of a closing arrangement i.e. latch lock, is blocked by a handle (2). The rotatable body is prestressed in a direction of the rest position.
