Abstract (en)

The device (10) has a housing (12) forming a pressure chamber (40), and two separator pistons (44) arranged in the pressure chamber. The separator pistons are moved in different directions during impact with a pressure impulse relative to the housing to separate current conductors (14) arranged in the housing. The pressure impulse is produced by a pyromechanical drive element (20), where the pyromechanical drive element and the separator pistons are extended in a plane. The separator pistons form an angle with the plane, and comprise a separation tool (48) for separating an electrical circuit.

Abstract (de)

Die Erfindung betrifft eine pyromechanische Trennvorrichtung mit einem eine Druckkammer bildenden Gehäuse und mindestens zwei in der Druckkammer angeordneten Trennkolben, die bei Beaufschlagung mit einem durch ein pyrotechnisches Antriebselement erzeugten Druckimpuls relativ zu dem Gehäuse bewegbar sind, um wenigstens zwei in dem Gehäuse angeordnete Stromleiter zu durchtrennen.
