Abstract (en)

[origin: US2009223273A1] Machines and tools that can be used to process (e.g., to cut and/or form) plate-like workpieces, such as metal sheets. In some aspects, a plate workpiece processing tool includes a first tool portion, which is drivingly connectable to a stroke drive, and a second tool portion. The tool has at least one processing device on the first tool portion and at least two counter-devices on the second tool portion. By using an activating device provided on the second tool portion, different device pairings can be activated for workpiece processing.
