Abstract (en)
[origin: DE202006016531U1] The miller (1) has a cylindrical tool shank (2) clampable at an upper end in a milling machine, and a milling region (3) attached to the tool shank. The region has several milling surfaces (4) that are formed as rough and smooth surfaces. Each surface has rough and smooth regions (11, 12), where each smooth region lies in the axial direction of the miller on an identical axial height of a rough region of the adjacent milling surface.
