Abstract (en)

[origin: EP1925441A1] A device for forming briquettes from a moldable material has a die lattice in which at least one receptacle space is formed, and at least one molding tool for pressing the moldable material in the receptacle space. The tool can be moved along a guide path having a shaped section (A) with which a constant pressure via a path is exerted by the tools on the portion of the moldable material located in the receptacle space . An INDEPENDENT CALIM is included for a method for forming a briquette.
