Abstract (en)

[origin: WO2008006577A1] The invention relates to a coupling device for attaching an accessory, such as a cycling computer, navigation device, light, radio, music player, map holder or a luggage holding unit in the front region of a bicycle, to a holding section (70, 71, 72, 80), which is supported on the front part of the handlebars (1), for attachment of the accessory or the luggage holding unit. A compact construction having simple, stable installation is obtained in that the holding section (70, 71, 72, 80) is designed for tool-free attachment of the accessory or of the luggage holding unit and is integrated directly in the front part of the handlebars (1) or in the clamping clip (11) of the front part of the handlebars (1).
