Abstract (en)  
[origin: US2010206875A1] A package (1) has a sealing region (2) which comprises a cover (3) and a sealing cap (4) which is rotatable in relation to the cover (3). Both the cover (3) and the sealing cap (4) have openings (5) and (6) which are eccentric but can be brought into alignment with each other. When said openings lie opposite each other, emptying of the package is possible, if, beforehand, a seal element (8) which seals the opening (5) is at least partially removed. The opening (6) is surrounded by a seal (12) so that no particles of product can get between cover (3) and sealing cap (4) during emptying of the package (1). The sealing cap (4) has a closing region (7) which is surrounded by a seal (13) and covers the opening (5) in the cover when the package is to be resealed.
