Abstract (en)

[origin: WO2008041119A2] A closing device (100) for bottles, in particular for bottles of alcoholic drinks or spirits, comprising a cap (1), consisting of a top portion (7) and a side portion (8), a top diffuser (2), suitable for coupling with the cap (1), a bottom diffuser (12), suitable for coupling at the top with the top diffuser (2) and at the bottom suitable for being constrained to the neck of a bottle (5), and a covering lining (4), divided into a top portion (4') and a bottom portion (4'') connected to one another along a predetermined breakage line (6), wherein the cap (1) comprises at least one closing tab (9) connected to said side portion (8) of the cap (1), which can take a first position of assembly of the closing device (100), wherein it does not interfere with the coupling between the cap (1) and the top diffuser (2), and a second safety position, subsequent to the first opening of the device (100), wherein the at least one closing tab (9) interferes with at least one abutment portion (15) of the top diffuser (2) preventing the complete reclosure of the device (100) on the bottle (5).
