Abstract (en)
[origin: WO2008060234A1] The present invention relates to a mounting frame (1), which is intended to be a fastened to but readily removable to an intermediate arrangement (A), which will enable a crane arrangement (2) to be mounted on a foundation (3), wherewith the foundation (3) includes a plurality, such as four, fastener units (4), which can be fastened to the arrangement and which are intended to be fastened, but readily removable, for co-action with frame-related fastener units (5) each being positioned opposite to the end portions (6a, 6b, 7a, 7b) of each respective one of two beam constructions (6, 7). The crane arrangement (2) includes an adapted support plate (8), which is affixed to a respective one of said beam constructions (6, 7) and in that the support plate (8) includes a plurality of first fastening means (9), intended for fixed but readily released co-action with second fastening means (10), assigned to the crane arrangement.
