Abstract (en)
[origin: FR2907832A1] The device has two guiding rails (10) oriented in a determined direction by defining a middle plane, and respectively provided with sliders (14) mobilely mounted in translation in the rails. Adapters i.e. plates (16), respectively connect the sliders and a glass, and freely mounted in translation in the sliders along a sliding direction (X) perpendicular to the rails and parallel to the middle plane, for authorizing sliding of the sliders with respect to the adapters when the sliders are driven in the rails to mobilize the glass in translation.
