Abstract (en)

[origin: WO2008040331A2] Loading apparatus (1) for a test bench (2) for testing a test object (17), with at least two loading machines (3, 4), wherein a first loading machine (3) comprises a first electric motor and a second loading machine (4) comprises a second electric motor, wherein the electric motors are each equipped for a predetermined loading range, and the loading range of the first loading machine (3) differs from the loading range of the second loading machine (4) or the other loading machines, wherein the loading machines (3, 4) can be connected individually to the test object (17) and/or can be connected via a coupling so as to transmit a torque, as a result of which a test region to be tested of the test object (17) is substantially completely covered.
