Abstract (en)

In a process for operating a dishwasher, comprising: (A) at least one cleaning step during which a warmed washing liquid containing a cleaning agent is circulated within the dishwasher; (B) at least one rinsing step during which a warmed washing liquid containing a rinse aid is circulated within the dishwasher; and (C) a drying step during which the circulation of the washing liquid is terminated and the washing liquid is drained from the dishwasher; it is suggested that: - during the rinsing step directly preceding step (C) the washing liquid is warmed to only such a degree that foaming of the rinse aid is avoided; and - during step (C) no heating energy is supplied to the dishwasher.
