Abstract (en)
[origin: EP2082867A2] The press has a die plate with two annular segments (20), which are attached to a rotor (10a) by a fastening device. Clamping elements (50) are arranged in passages of the rotor, which are spaced apart in a perimeter distance. The elements downwardly act against ring segments and clamp against an abutment surface of the rotor. Drive devices (42, 44) for the clamping elements are arranged in a stand of the tablet press. The drive devices has coupling elements (46) adjustable in the height. The coupling elements are selectively set into engagement with lower ends of the clamping elements.
