Abstract (en)

[origin: EP2082964A1] The method involves introducing articles (12) made up of a semi rigid material e.g. corrugated cardboard, in a packaging device (14) via an end of a waist (16), where the end of the waist is oriented towards arrival of the articles. A closing unit (18) arranged at the end of the waist is closed after being filled with the articles. The packaging device made up of a folded cardboard blank is used to package the articles, where another closing unit (20) of the packaging device includes an inclined panel (26) arranged in a manner to form an angle less than 85 degrees with a given direction (10). An independent claim is also included for a device for packaging a bulk of articles.
