Abstract (en)

[origin: EP2083120A2] The device has a gabion in adjacent proximity of the track, which is filled with crushed stones and lies on a sub-structure protective layer. The height of a gabion under adherence with a small space profile exceeds over track elevation. A sub ballast mat (1) is arranged under ballasted track, where the sub ballast mat is made of geotextile or an elastomeric layer (2).
