Abstract (en)  
[origin: WO2008062113A1] The invention relates to a structure (3) for a shoe (1) made of a synthetic flexible material and to be provided between an outer sole (5) and the upper of the shoe (2), characterised in that it comprises at least two essentially parallel longitudinal members (6-9) provided in the vicinity of the structure edge and connected by at least two cross members (10-15) essentially perpendicular to the longitudinal members (6-9), a portion at least of the cross members (10-15) having a longitudinal axis with a tubular cross-section of a generally oval shape defining a hollow area.
