Abstract (en)

[origin: WO2008052746A1] The invention relates to an armrest (1), in particular for an office chair or the like, comprising an armrest column (2) and an armrest carrier (3) which can be displaced in its height on the armrest column (2). In order to allow a particularly simple height adjustment of an armrest (1), an armrest (1) is proposed which comprises a latching device (13, 15) and a number of openings (12) to form a locking mechanism such that, to fasten the armrest carrier (3) in a defined height position, a latch (15) of the latching device (13, 15) engages in one of the openings (12). Furthermore, the armrest comprises an actuating element (19) for altering the height position of the armrest carrier (3), wherein the actuating element (19) cooperates with the latching device (13, 15) in such a way that the actuation thereof results in the latch (15) being removed from the opening (12), and it prevents the latch (15) from being removed from the opening (12) in the non-actuated state.
