Abstract (en)

[origin: WO2008056090A1] The invention relates to a device for regenerating human skin in the form of a multi-layered complex that comprises a resorptive polymer inner matrix (1) capable of inducing skin regeneration by contact with the muscle or the subcutaneous tissues (3), a non-resorptive net-like textile ply, and a transparent outer carrier, characterised in that the net-like textile ply is entirely contained in the mass of the transparent carrier (4.1, 4.2).
