Abstract (en)
[origin: WO2008053223A2] A folder is disclosed having two side sections flexibly joined by a base section so as to enable the folder to be opened and closed. A fastener for securing documents inside the folder is attached to a side section adjacent the edge of that side section furthest from the base section such that, when the folder is open, a document can be attached to the fastener so as to extend over the base section and, when the folder is subsequently closed, the document bent over adjacent the base section without creasing. Preferred embodiments comprise a sliding mechanism which can slide from a first position where it is engaged with only one side section to a second position where it is engaged with both side sections, thereby holding the folder open. Especially preferred embodiments have a plastic insert sheet adapted to further protect the documents stored in the folder and resist creasing thereof.
