Abstract (en)

[origin: WO2008052878A2] The present invention relates to a wheel (1) wound from fiber-reinforced plastic having a wheel spider (2) and a rim well (3). Here, it is essential to the invention that a plurality of rings (4) which bear against one another and are connected to one another in a common surface form the wheel spider (2), wherein the wheel spider (2) and the rim well (3) have synthetic-resin-impregnated, wound carbon fibers and are cohesively connected to one another.
