Abstract (en)

[origin: WO2007135292A2] The invention concerns a modular container consisting of plural elementary containers (1) stacked sequentially into one another. The elementary containers (1) comprising a recessed base (5) for receiving a neck (2). Nesting elements (5, 7) assemble the peripheral ramps (8, 9) in nested co-operation capable of assembling together the elementary containers (1) by rotating their axial junction, and end-of-travel stops (10, 11, 14, 15) of said rotation in clip-on co-operation which constitute the rotated assembly of the elementary containers (1) and capable of preventing spontaneous reverse rotation.
