Abstract (en)  
[origin: WO2008122298A1] The invention relates to a seal for a receptacle, particularly for liquid and highly viscous filling material, comprising: a first part which has an outer side wall; a second part; and a security seal device which has at least one security seal element. Furthermore, according to the invention, the first part has at least one holding device. According to the invention, in a first position the security seal element is connected to the second part by means of a connecting device and is not connected to the first part; in a second position the security seal element is connected to the second part by said connecting device and, moreover, is in this second position connected to the first part by means of the holding device; and the security seal element can be converted from this second position into a third position in which the security seal element is separated from the second part and is again connected to the first part by means of said holding device.
