Abstract (en)
[origin: WO2008052725A1] The invention relates to a ground covering made of shaped bricks (10, 11), in particular of paving stones or slabs or the like, wherein the shaped bricks (10, 11) each have a preferably flat upper side (12) and underside (13) and at least one preferably upright side surface (14), and wherein the shaped bricks (10, 11) are laid inside the ground covering next to each other, and wherein adjacent shaped bricks (10, 11) have at least partly a gap between each other in the area of the seams (17), and wherein the gaps (17) between the adjacent shaped bricks (10, 11) are filled with a gap filler material (18) for load transfer between adjacent shaped bricks (10, 11) of the ground covering. According to the invention, it is provided that at least one contact cam (15, 16) is formed in the area of the at least one side surface (14) of each shaped brick (10, 11) for permanently laying adjacent shaped bricks (10, 11) in contact with each other. The contact cams (15, 16) differ from previous gap holders in that they make possible a permanent, nondestructive laying of adjacent shaped bricks (10, 11). The contact cams (15, 16), in contrast to previous gap holders, can be set under each other for transferring the shaped bricks (10, 11) into contact with each other in such a way that the transfer of the shaped bricks (10, 11) into the ground covering is simplified.
