Abstract (en)

[origin: CA2675154A1] The invention relates to a method and a device for identifying (26) objects, wherein a signature (10) is generated for each object in a first step, including characteristic features (A, B, C, D, E) of the object and the objects are collected into object groups. In a subsequent step, after the completion of the first step, a distinguishing condition is derived from the signatures of the objects in said object group only for the objects of said group. In a subsequent step for identifying the objects of said object group, the distinguishing condition determined in the previous further step is used, wherein with specified matching of the distinguishing conditions, the objects are identified in the subsequent step.
