Abstract (en)
[origin: EP2084990A1] The support (14) has a connecting section (22) connecting to a shelf support, and a supporting section (26) for holding a lower shelf. The connecting section lies in a vertical layer and the supporting section is movably arranged parallel to the layer so that the support does not contact the layer in a region of the supporting section. The connecting section partly lies in a height position within a region of a horizontal layer. The supporting section is arranged in another height position that is vertically displaced to the former height position. An independent claim is also included for a shelf system comprising a shelf support.
