Abstract (en)  
[origin: EP2084992A2] The furniture part (10) has a leg segment (40) attached to a main segment (20) by a rigid connection element (80). The leg segment is relatively movable between a blocked position and a functional position against the main segment. The connection element is pivotably articulated to the main segment or a base frame of the furniture part at a rotation axis (1) stationary to the main segment or the base frame. The connection element is pivotably articulated to the leg segment at a rotation axis (2) stationary to the leg segment. An independent claim is also included for a fitting for a seating furniture part.
