Abstract (en)  
The generator (3) has rotatable imbalance masses positioned on shafts (33), and a hydraulic drive having a changeable suction volume. An adjusting unit adjusts a rotation position of imbalance masses relative to one another. A control module sets suction volume as a function of an operational pressure or speed of rotation. A control and regulation circuit includes a memory unit (10) for storing ground composition data sets or task-specific default data sets with defined operational characteristic variables.

Abstract (de)  
Die Erfindung betrifft einen Schwingungserzeuger (3) für ein Vibrationsrammgerät umfassend rotierbare Unwuchtmassen (3311,3321,3331,3511,3521,3531), die auf Wellen (33,35) angeordnet sind, wobei ein hydraulischer Antrieb (38) mit veränderbarem Schluckvolumen angeordnet ist. Die Erfindung betrifft weiterhin ein Vibrationsrammgerät mit einem solchen Schwingungserzeuger (3).
