Abstract (en)

A process for realising a matrix for realising a tile, comprising the stages of: forming a base structure (15) exhibiting an in-view surface (17); forming, at the in-view surface (17), a plurality of projecting reliefs (18), each exhibiting a respective crest (18a) being substantially equidistant from the base structure (15) in order to define a single treading plane. The forming of the reliefs (18) comprises the stages of: forming a first zone having substantially parallel and equidistant reliefs (18); and forming a second zone having reliefs (18) orientated transversally with respect to the reliefs (18) of the first zone. The reliefs (18) of the second zone are distanced to a different amount than a distance between the reliefs (18) of the first zone.
